Objective

Our purpose in iteration 2 is to flesh out our prototype in figma, showing a more detailed version of what the app could look like as an end product.

We've also made a prototype in android studio with little functionality and a slightly different approach when it comes to aesthetics, these changes can and may be changed in the future (very likely), however we would like to hear feedback on the visual differences between the actual app prototype and the one in figma.

Comments

We've learned how to use figma, and work a little bit better as a team. We are slowly learning to work more organized as a team outside as well as inside android studio. We've also been given good advice on some important key features from our PO.

The core user goals and tasks chosen for the MVP

The UI design for the following:

M4 Deltager skal kunne tilmelde sig til oprettede events. Dette omfatter:

- Deltager kan vælge mellem events, hvor der er åbent for tilmelding.
- Deltager opretter profil med følgende oplysninger: Navn, email, adresse, mobil
- IKKE LAVET (- Deltager skal acceptere betingelser for tilmelding og deltagelse.)**
- Hver deltager tildeles fortløbende startnummer.

M5 Deltager oprettes på deltagerliste efter endt tilmelding. Listen er tilgængelig i appen og viser oversigt over alle tilmeldte deltagere i startnummer-orden.

Not done:

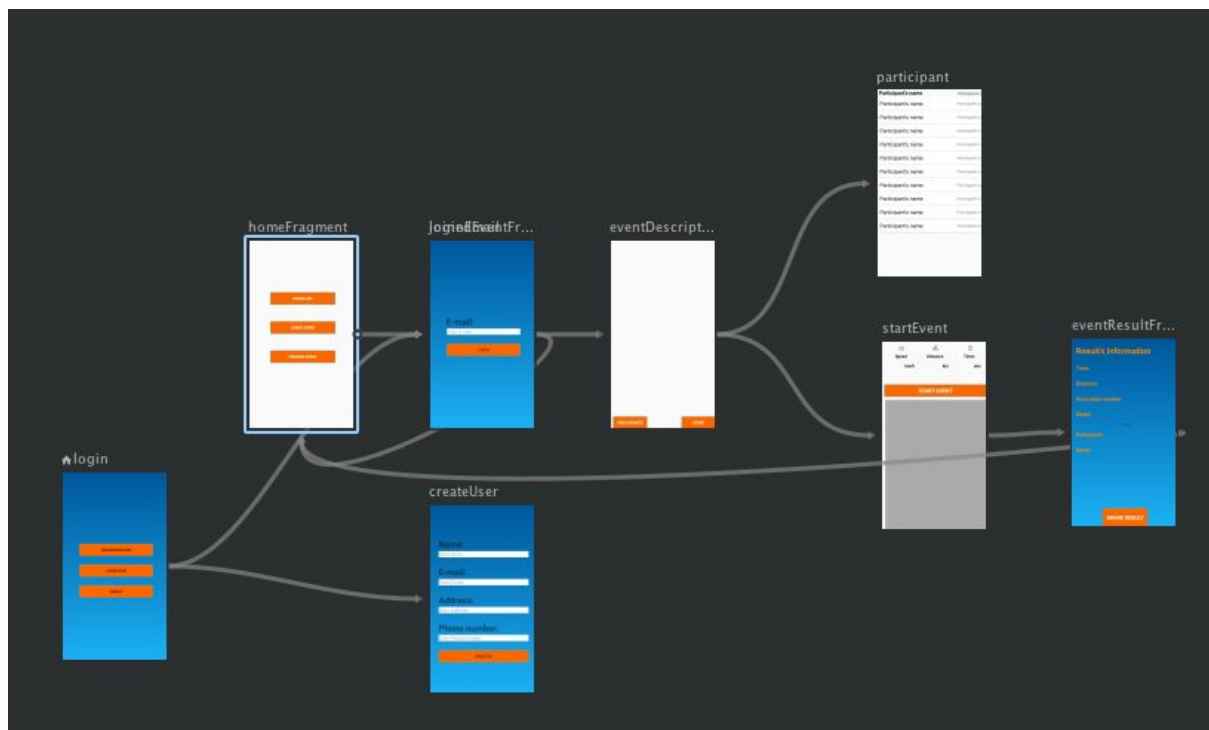

The organizer is not designed in our current UI Design in android Studio. Although it exists in our figma design of the app, we chose to leave it out unsure whether we would do it via a database instead.

Goals/Tasks implemented

The main idea behind the implementation is Navigation component and Fragments.

We have implemented RecyclerViews(listing things) and button functionality for the different fragments(pages). Which means that you can go through the different pages. The specific pages that need listing,- participants-list etc.

APK

Layout is working on our phone. We will make sure next time that the app works on almost all phones
